Security Hinge Bolt

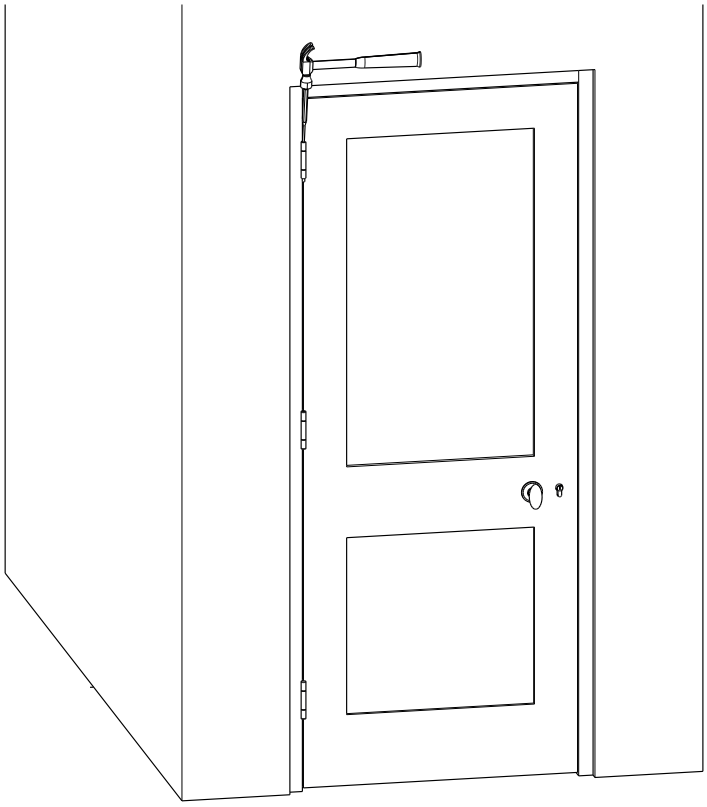

Technical Help Sheet

Security hinge bolts offer additional security on external hinged doors, especially for outward opening timber doors with exposed hinges. They are available in a limited range of finishes as they are made from hardened steel.

We recommend hinge bolts for outward opening doors, as in the event of a break in, even if the hinges are damaged/removed, it is not possible to remove the door if a hinge bolt is installed.

If you need any assistance with fitting please contact our team who are on hand to assist you.
